

Addendum to the Rear Projection SMART Board™ 2000i Interactive Whiteboard Installation Guide

This addendum contains information that has changed since the release of the Rear Projection 2000i SMART Board Interactive Whiteboard Installation Guide.

Projector

The printed installation guide states that your 2000i DVX includes an NEC VT670 projector.

However, your 2000i may include an NEC VT676 projector instead. The VT676 is very similar to the VT670 in appearance and in many of its characteristics. The information in the printed installation guide concerning the VT670 projector, including the instructions for its use, cleaning, adjustment, removal and installation, also applies to the VT676 projector.

Rear Legs

Many of the graphics in the printed installation guide show the 2000i with four legs. The two rear legs are not present on some 2000i interactive whiteboards. This doesn't affect the stability of the unit.

Power Management

You can configure the 2000i's internal computer to stop sending an RGB video signal to the projector after a period of inactivity. The printed manual incorrectly states that when the internal computer is the 2000i's active display source, the inactivity period triggers the projector to wait for 30 minutes and then go into Standby mode. The projector actually waits for approximately five minutes before going into Standby mode.

NOTES

- When the projector is displaying a composite or S-video source, the projector won't go into Standby mode after a period of inactivity.
- Make sure the projector is in Standby mode outside of normal, daily (eight hour) operation. In Standby mode, the lamp turns off, but the projector remains on. Press the Lamp Off button on the Control Panel at the end of the day, and your projector remains in Standby mode until you press the Lamp On button the next day.
